

AUDITOR

REAL-TIME CHANGE AUDITING AND RECOVERY FOR WINDOWS ENVIRONMENTS

AD Auditing & Recovery

Pinpoint changes and instantly roll back unwanted changes to Active Directory to recover from errors with minimal effort.

File System Auditing

Audit, alert, and report on Windows file system and NetApp access faster and with greater detail than native auditing.

Exchange & SQL Auditing

Get real-time auditing, analysis, and alerts for Microsoft Exchange, and report on changes made to SQL Server.

BeyondTrust Auditor mitigates the risks of unwanted changes and helps organizations better understand user activity to meet compliance requirements by centralizing change auditing, restoring objects or attributes, and enforcing entitlements across the Windows infrastructure.

Features and Capabilities

- **Audit & Alert:** Achieve requirements for PCI, SOX, HIPAA and more by auditing and alerting to Active Directory configuration and GPO changes, and changes to File Systems, Exchange, NetApp, and SQL configurations. Understand who performed each change, what changed (including pre/post values), when the change occurred, and where the change was made – all in plain language.
- **Recover & Roll Back:** Instantly roll back unwanted changes, or just what's needed, to any previous state, right up to the point of the error. Recover the full tree, a portion of the directory, selected objects, or individual attributes, avoiding end user disruption or affecting other parts of the Active Directory system. The centralized database enables both auditing and recovery, delivering a broader set of capabilities than native AD auditing – without the operational impacts.
- **Discover and Enforce:** A centralized view of access and privileges helps administrators know who has access to which resources and can see the exposure of sensitive information and intellectual property.
- **Centralize and Simplify Administration:** The centralized dashboard simplifies administration and reduces the number of tools administrators must manage. Audit critical changes made to Group Policy objects in BeyondTrust Privilege Management for Desktops, and cells in BeyondTrust AD Bridge, providing a complete audit trail across your privileged access management deployment.

Flexible Options Based on Need

BeyondTrust Auditor is offered in three editions – Essentials, Advanced, and Ultimate – ensuring that organizations can focus their auditing efforts on what’s most important with easy upgrades into the console when required.

EDITIONS
