

PASSWORD & SESSION MANAGEMENT IN THE CLOUD

PRIVILEGED REMOTE ACCESS CLOUD

Vault Privileged Passwords

Discover, manage and rotate privileged credentials for Windows platforms and seamlessly inject those credential on-demand.

Streamline Privileged Session Management

Standardize to a more secure and complete privileged session management solution that controls the access to and from any platform in any environment.

Meet Audit & Compliance Requirements

Create a full audit trail of privileged access usage with session recording and real-time visibility into privileged user behavior and activity.

The BeyondTrust Privileged Remote Access (PRA) cloud-based solution provides comprehensive privileged session management and essential vaulting capabilities for internal, external and third-party privileged users, enabling organizations to manage both privileged sessions and passwords for any environment. The solution provides broad coverage for cloud-first organizations over a large set of cybersecurity use cases and boosts the level of security in any organization.

The Privileged Remote Access cloud deployment enables organizations to gain control and increase security quickly, and was built for businesses looking for a quick time to value with their PAM solution. BeyondTrust hosting your PRA deployment in the cloud reduces the time needed to manage additional underlying infrastructure, freeing up resources in your IT team.

Features and Capabilities

- **Simplified Password Management:** The Vault feature, included with PRA, protects privileged credentials with discovery, management, rotation, auditing and monitoring for any privileged account – from local or domain shared administrator, to a user's personal admin account – even SSH keys, cloud and social media accounts. Get detailed password usage reporting and more.
- **Privileged Session Management:** End to end security for remote access sessions - from any location via any device. Multiple session and access types are supported, including the BeyondTrust secure agent, RDP, SSH, VNC, BeyondTrust Advanced Web Access, and TCP with Protocol Tunneling. In addition, we provide multiple ways to manage how your users and vendors initiate access, including notification and approval requests, and two-factor authentication is included.
- **Attack Surface Reduction:** Increase security and reduce the risk of a cyberattacks by consolidating the tracking, approval, and auditing of privileged accounts in one place and by creating a single access pathway.
- **Audit & Compliance:** Create audit trails and enable session forensics by capturing detailed session data in real-time or for post-session review. Easily create attestation reports to prove compliance.

Choose the Deployment Model That's Right For You

Whether your IT infrastructure is entirely in the cloud or is a hybrid model, BeyondTrust solutions will work for your needs.

Privileged Remote Access enables organizations to securely discover, manage, audit and monitor their privileged accounts – from local or domain shared administrator, to a user's personal admin account, to service, operating system, network device, database (A2DB) and application (A2A) accounts – even SSH keys, cloud identities and social media accounts.

The following cloud deployment options are available to control, protect and monitor privileged access:

- **Private Cloud** Deploy our solutions to your AWS, Azure or Google environment.
- **Software As A Service (Cloud)** BeyondTrust will host your deployment in a secure, single tenant cloud instance.

BUSINESS BENEFITS

Reduce Operational Complexity

The Privileged Access Management cloud solution will reduce your operational costs and administrative burden, as well as streamline workflows by eliminating VPNs, agents and credentials needed for remote vendor access. Eliminate hardware or infrastructure costs and start right away.

Manage Privileges and Passwords

Eliminate unnecessary privileges by managing credentials in the cloud and making the management of privileged access easier and more cost-effective for your business. Our cloud-ready solution manages over 5,000 windows credentials and can store up to 10,000.

Create An Audit Trail

Centrally secure and audit internal and vendor access across a variety of environments and meet compliance mandates.

Control Privileged Access

Enable granular access to specific systems, improving security and eliminating “all or nothing” access to vendors or internal resources.

BeyondTrust is the worldwide leader in Privileged Access Management, offering the most seamless approach to preventing privilege-related breaches. Our extensible platform empowers organizations to easily scale privilege security as threats evolve across endpoint, server, cloud, DevOps, and network device environments. We are trusted by 20,000 customers.
